

Fusible material

Cloud Cover Stitch, offered by Cotswold Industries, is specifically designed to be used on the backside of embroidered designs. The lightweight fusible material is designed to be used in conjunction with a stabilizer when embroidering and is suitable for use on a wide range of delicate fabrics such as silk, satin, lame and chamois to give the fabric more body while not altering its appearance or drape. It also prevents unraveling and shredding so embroidered designs hold up better to everyday wear and tear, according to company literature. It is offered in 30" width rolls. It comes in white, black and beige in 30" X 25-yard and 60" X 100-yard rolls.

Sublimation printer system

The 44" Epson SureColor F6070 is the first dye-sublimation printer from Epson. The company reports that every component, from ink and printhead to printer chassis and bulk ink delivery system, is designed and manufactured by Epson. The F6070 supports an extensive range of applications, including efficient production of sportswear, apparel, soft signage, accessories and customized promotional products. The printer leverages a newly optimized Epson MicroPiezo TFP printhead and specially formulated Epson UltraChrome DS dye-sublimation ink for best end-results. It is said to produce industrial-level production with output of 1,440 X 720 dpi, at maximum and speeds as fast as 618 sq. feet per hour.
