

Pad printer

Pad Print Machinery of Vermont introduces the EAZY90 pad printer—one of three in the Eazy Inkprint Series. The pneumatic operation assists in printing uniformly and the 90 mm diameter sealed inking system is designed to enable quick color changes. The control panel allows the operator to set the speed, pickup and print strokes as well as continuous and/or single cycles.

Screen printing foil

Graphic Solutions Group carries Amagic screen printing foil. Available in a wide range of colors, it can be adhered using a screen-printed foil adhesive or pressed down firmly on plastisol ink as it comes out of the dryer. The foil comes in a 12.5" X 200-yard roll which can be cut to the appropriate size and laid directly over the desired area.

Dissolvable stabilizer

Cotswold offers wash-away dissolvable stabilizer for creating free-standing appliqué that can be used to decorate apparel or create emblems. The water dissolvable stabilizer is reportedly soft, sheer and is said to leave no fiber residue. Cotswold eliminates formaldehyde from its chemistry and uses a significant percentage of post-consumer recycled fibers in the manufacturing process, making this product more environmentally-friendly.

Stencil film

RhinoScreen Dry Stencil Film from RhinoTech eliminates the need for film positive, emulsion, capillary film and exposure or drying time, according to company literature. The stencil is produced in two steps after creating/printing the design. The company also reports that this process affords safer, environmentally-sensitive products for screen printers, the ability to recycle paper that contain no silicone or organic pollutants, while reducing production time and inventory space needs.
