

Keeping It Green!

Eco-STICK

Photo courtesy of www.adesignbylyn.com

A 1.5 oz “wet laid” biodegradable adhesive non woven stabilizer with the best and most needle friendly adhesive used in sewing – to date.

It is used in "hoopless" or clamp type embroidery applications for hard to hoop items such as heavy towels, CD cases, backpacks, cuffs, collars, socks etc.

With Eco Stick embroidery in every area is possible.

Eco Stick being a tearaway / washaway you will not need to pick out stabilizer remnants from open designs as it will disappear after an initial wash.

It is used for fabrics that can be marred by the hooping process to avoid hoop "ring burn" like velvet, suede, ultra suede, some leathers , satins. and other delicate fabrics.

Eco Stick utilizes the latest and the most needle friendly adhesive available. It will avoid gummy build up and residue on needles and hoops which can lead to excessive thread breaks.

Please note that Eco Stick will support medium density stitch counts up to Approximately 12,000 stitches. For higher and more dense stitch counts just add another layer of tearaway - hooped or "floated" under the hoop.
