

## Numbering attachment

The DiGiT instant numbering system from Vastex converts nearly any rear-clamp manual screen printing press into an athletic numbering press. The system utilizes a standard press, two screen frames, each with five numbers and the DiGiT clamp-in slide assemblies. The sliding rail assemblies have roller bearing glides, a precision detent locator and an easy to use bright yellow target which allows the operator to locate the exact number to print. Company literature reports that the DiGiT locates all 10 numbers placing them correctly, fully compensating for the thinner number one. An additional set of rail assemblies can be added to four-, eight- and 10-station presses to print number outlines in a second color. Model V2NS-12 prints athletic numbers as tall as 30.5 cm. Model V2NS-8 prints numbers as high as 20.3 cm tall. The sliding screens can also be used for printing of other variable graphics such as team names, sponsor names and chest images, while press stations not being used for variable printing can be used with regular screens in normal fashion, or as loading/unloading stations.

## Performance wear stabilizer

Cotswold offers a cutaway embroidery stabilizer designed for performance wear. Tech Weave is made of 50/50 polyester/ rayon and, when used on the bias, it stretches with the fabric reportedly reducing the stress on stitching. According to the company, it features low shrinkage, which decreases puckering and provides a stable foundation that keeps stitches looking sharp and in registration.
